Donghui Li, Ph.D.

donghui.li@princeton.edu | (217) 721-3706 | https://donghuili.me

RESEARCH INTERESTS

- Large-Scale Hydrological and Water Resources Modeling
- Flood, Drought, and Compound-Hazard Modeling
- Hydroclimatic Prediction and Projection Across Weather-to-Climate Timescales
- Physics-Aware AI for Earth and Environmental Systems

EDUCATION

2020.08–2024.08 **Ph.D. in Civil and Environmental Engineering; Minor in Statistics**
University of Illinois Urbana-Champaign, USA

2018.08–2020.08 **M.S. in Civil and Environmental Engineering**
University of Illinois Urbana-Champaign, USA

2014.09–2018.07 **B.E. in Hydraulic Engineering**
Tsinghua University, China

PROFESSIONAL EXPERIENCE

2024.09–present **Postdoctoral Research Associate**
Princeton University, USA; currently working with NOAA Geophysical Fluid Dynamics Laboratory

2025.01–2025.05 **Lecturer**
Princeton University, USA

2018.08–2024.08 **Graduate Research Assistant**
University of Illinois Urbana-Champaign, USA

SELECTED PROJECTS

Prediction of Hydroclimatic Extremes Across Timescales | Ongoing work with NOAA GFDL

- Linking SPEAR seasonal prediction ensembles with distributed hydrological and hydrodynamic models to develop and evaluate seasonal flood-risk predictions.
- Investigating how prediction skill changes as atmospheric information propagates through land and river networks.

High-Resolution Flood Inundation Modeling | Project Lead | Industry-Sponsored Collaboration (*Confidential*)

- Led the proof-of-concept implementation of the coupled Tiger-HLM–TRITON framework at 30-meter resolution across the Delaware and Susquehanna River Basins.
- Drove the modeling chain with atmospheric forcings from a large climate ensemble to produce probabilistic inundation estimates for catastrophe-risk assessment.
- Delivered a technical report and probabilistic inundation data products to the sponsor.

Large-Scale Modeling of Reservoir Operations and Managed River Systems

- Developed a family of interpretable and transferable machine-learning models, GDROM and MODROM, to infer reservoir operating behavior and extend its representation to data-scarce reservoirs.
- Integrated these models offline with the National Water Model and the Variable Infiltration Capacity model to quantify how reservoir operations affect regulated streamflow, drought propagation, and water availability.
- Developed TigeRes, a two-way coupled reservoir–hydrology framework that integrates MODROM into Tiger-HLM.

[*] These authors contributed equally.

SOFTWARE AND DATA

GDROM | Co-Developer | Project link

- Machine-learning-based reservoir operation rules for 450+ CONUS reservoirs.
- Co-developed the machine-learning algorithm and data pipeline.

Tiger-HLM | Contributor | GitHub

- A high-performance, process-based hydrological model (rainfall–runoff–routing) accelerated using GPU (CUDA) and OpenMP.
- Implemented snow and soil-temperature modules for improved cold-region representation.
- Implemented an I/O module supporting large-scale simulations.

TigeRes | Developer | GitHub

- A version of the Tiger-HLM framework that includes coupled water management for regulated-streamflow simulation.

AWARDS & FELLOWSHIPS

2023	**Mavis Future Faculty Fellowship** *University of Illinois Urbana-Champaign*; "to facilitate the training of the next generation of great engineering faculty."
2021 & 2023	**Conference Travel/Presentation Award** *University of Illinois Urbana-Champaign*
2018	**Yen Fellowship** *University of Illinois Urbana-Champaign*
2016 & 2017	**Academic Excellence Scholarship** *Tsinghua University*

TEACHING EXPERIENCE

Lecturer, High Meadows Environmental Institute, *Princeton University* 2025 Spring
ENV 423 Hydroclimatology
- Co-developed and delivered course materials for ENV 423 Hydroclimatology with Professor Villarini.
- Lectured on Python programming and its applications in hydroclimatology and statistical hydrology.

Wintersession Co-Facilitator, *Princeton University* 2025 Wintersession
Introduction to Physical Hydrological Modeling
- Lectured on the fundamentals of physically based hydrological modeling.
- Led a hands-on training workshop on the SWAT model.

Computing Teaching Assistant, *University of Illinois Urbana-Champaign* 2024 Spring
Computing-intensive courses across the CEE curriculum
- Led weekly seminars and tutorials focused on scientific programming.
- Held regular office hours providing technical assistance with programming problems.

Teaching Assistant, *University of Illinois Urbana-Champaign* 2021–2023 Fall
CEE 434 Environmental Systems I
- Lectured on the fundamentals of machine learning and its applications to water resources engineering.
- Graded assignments and held office hours.

TECHNICAL SKILLS

Programming & Tools: Python, R, C/C++, Fortran, MATLAB, SQL, Git, scikit-learn, PyTorch, LaTeX
Environmental Modeling: VIC, WRF-Hydro, SWAT, TRITON, Tiger-HLM
High-Performance Computing: UNIX/Linux, Bash scripting, OpenMP/MPI, CUDA, Kokkos

ACADEMIC AND VOLUNTEER SERVICE

- Journal Reviewer: *Earth's Future*; *Ecological Indicators*; *Environmental Modelling & Software*; *Geoscientific Model Development*; *Hydrology and Earth System Sciences*; *Journal of Hydrology*; *Journal of the American Water Resources Association*; *Water Resources Research*.
- Early Career Convener, AGU 2025: "H004—Advancements in Physics-Based, Integrated Hydrologic Modeling to Support Water Resources Management."
- Session Moderator, Environmental & Water Resources Institute (EWRI) Conference, 2022.

PROFESSIONAL AFFILIATIONS

- Member, American Geophysical Union (AGU)
- Member, American Meteorological Society (AMS)
- Member, American Society of Civil Engineers (ASCE)
